### Apple Photos vs iPhoto

- This is the new Photo's app: OS X - Photos - Apple

<http://www.apple.com/osx/photos/>

- iPhoto is still on Apple's website: iPhoto for Mac - Apple

<http://www.apple.com/mac/iphoto/>

- But it is no longer on Apple's Mac Apps Support:

Mac Apps - Apple Support <https://www.apple.com/support/mac-apps/>

- To continue using iPhoto you need version 9.6.1.

- Update iPhoto before you upgrade! If you purchased iPhoto it is in your Purchased tab in the App store.

- Get started with Photos for OS X: <https://support.apple.com/en-us/HT204655>

- Best ebook "Take Control" tutorial around: <http://tid.bl.it/1IZvOKC>

### Tips:

- When Converting, do not use iCloud yet, look at your iCloud storage decide between one or more than one library and do it later.

- You can use iPhoto and Photos at the same time but they are independent so any changes are in that apps library only.

### Important Differences:

- Events (once "Film Rolls") turn into folders. They are moved to the "iPhoto Events" folder

Solution: Use "Last Import" album after importing. Select all and New Album... to place all imported pictures in a new album.

- Star ratings are gone, now moved to Keywords

### **My frequently used features:**

- Help Menu -> Photos Quick Tour View -> Show Sidebar  
Look in the menu's, it may be there!
- Hold "Option" when opening Photos to choose a library
- Multiple libraries to separate home from Business or iCloud Photo Library from local library only
- Make sure you select in prefs: "Copy items to the Photos library" for security.
- For non-destructive editing, use not only "Revert to original" but also "Duplicate 1 photo"
